

5. Higan: infant 3 years old currently but growing
 - a. Not born normally
 - i. He was never supposed to exist. Leora cannot have children anymore (tied to the immortality ritual that they don't speak about) and he was only conceived because she is the Alraune and an entity attached itself to her womb after she slept with Sukuna.
 - ii. His soul/body was hidden in death and the entity fed off of her through a tether.
 - iii. Leora was in so much pain she would faint and have seizures.
 - iv. Chobei took her pain and eventually entered death with Sukuna and Tsukihiko to look for the child to cut the tether
 - v. Chobei made a choice not to let the child die and removed the tether, filling the space it left with his own tao.
 - vi. Now Higan has red spider lilies on his neck and shoulder where the tether was and Chobei has on his hand red lilies.
 - b. **Name:** Higan (彼岸)
 - c. **Meaning:** “The Other Shore” (boundary between life and death)
 - d. **Affiliation:** Sukuna–Leora Estate / Death-Adjacent Lineage Core
 - e. Higan is not simply a child of two powers—he is a child who was **temporarily removed from ownership by death itself**.
 - f. Before his full stabilization into the living world, Higan was: **Tethered inside death by an external entity attempting to weaponize his existence and exploit Leora’s reproductive cursed lineage.**
 - g. This made him a **contested soul-object** between life, death, and interference.
 - h. **Red Spider Lily Marks**
 - i. **Higan:** neck + shoulder markings
 - j. **Chōbei:** palm/hand marking
 - k. These are not scars.
 - l. They are: Residual death-binding signatures
 - m. Shared anchoring points between living and death-contact
 - n. Proof of mutual survival through a single severed tether
 - o. Soft dark hair with Sukuna-Leora tonal fusion
 - p. Eyes: shifting liminal coloration (crimson ↔ pale ash)
 - q. Body temperature subtly inconsistent (life/death oscillation)
 - r. Calm, almost “listening” stillness even while awake
 - s. **Marking** faintly pulse when:
 - Sukuna exerts cursed pressure nearby
 - Leora uses necromantic resonance
 - Chōbei is within proximity
 - t. **Primary State: “Re-Integrated Life”**

- u. Higan is no longer fully “untainted birth-life.” He is: A child partially reclaimed from death Stabilized through external intervention (Chōbei + Sukuna + Tsukihiko presence in death-layer)
- v. **Passive Effect: “Residual Recognition”** Death-based entities recognize him as “previously belonging elsewhere.” Living beings perceive him as unusually quiet or distant. Cursed energy does not “strike” him cleanly—it bends around him like a remembered shape
- w. **Personality (Infant Layer)**
- x. Minimal crying; high observational stillness Responds strongly to: Tsukihiko’s presence (pattern familiarity) Leora’s proximity (death-lineage anchor) Sukuna’s pressure (authority recognition) Chōbei’s proximity (tether resonance stabilizer imprint)
- y. Sleeps most deeply when near multiple “anchors” at once
